GENERAL NOTES

1 COAST FEATURES: The immediate coast area including fore shore consists of rocky reefs, isolated rocks which are sunken or awash, rocks which do not cover (elevation above M.H.W.). Above details, including soundings and depth curves are not shown. Reference: U.S.C.&G.S Chart No. 5403 Scale 1:50,000, "Monterey Bay"

2. SURVEY DATA:

a. Horizontal control: California Plane Coordinates, Lambert projection, Zone IV

Triangulation Stations - U.S.C. & G.S.

Station	Latitude	Longitude	Grid Coordinates X	Y
Pt. Pinos L.H.	36°38'00.300"	121° 55' 57.538"	1,139,641.27	486, 414.96
Horn (1932)	36°38'09.786"	121° 56' 05.159"	1,139,049.72	487, 392.74

b. Bearings: All bearings refer to a true meridian.

c. Vertical control: All elevations refer to a Zero Datum of M.L.L.W. M.S.L. Datum is +2.99 feet. Reference elevation is the rim of a 30 inch dia. sewer manhole at center line of Asilomar Boulevard, 50 feet easterly from Coast Guard entrance gate to station. Rim elevation 65.60 feet (average), by City Engineer

d. Contour interval is 2 feet
